

As the leader in innovative memory solutions, Micron is helping the world make sense of data by delivering the technology needed to unlock its vast potential. Our memory and storage is used to leverage the value of data: unlocking financial insights; accelerating scientific breakthroughs, and enhancing communication around the world.

In Italy, we create innovation in our advanced technology and product research and development centers in Vimercate, Avezzano, Padova, Arzano, and Catania.

Our history of giving back started in 1999 when we established the Micron Foundation.

As a financially separate, private and non-profit organization, Micron Foundation supports Educators, Students, and Communities where Micron employees live and work.

Micron Foundation is focused on developing effective programs that promote science, technology, engineering, and math education (STEM).

Micron Foundation believes educators can inspire students to pursue a world full of possibilities with the aim of sparking a passion in the next generation of scientists and engineers.

When students realize that what they are learning has application beyond the classroom, their education takes on new meaning. The Micron Foundation provides programs that help students see how science, technology, engineering and math play a critical role in everyday life.

Micron Foundation supports activities that address the priorities and concerns of the communities where Micron employees live and work. Micron knows that education and a strong community are vital to the success of both society and innovative companies. Each of Micron's sites around the world, know and understand the complex needs of their community. That's why the Micron Foundation has a broad portfolio of organizations and events that it supports to enrich each unique community.
